## Global Warming: Tying It All Together

---

---

1. What specifically have you learned about the causes and effects of global warming?
2. Did you learn about anything else that you weren't expecting to learn when you asked your questions at the beginning of this unit? Please explain.
3. Throughout the unit, you "read" many sources: you read the photographs of the glaciers melting; you read videos, graphs, scientific illustrations, websites, and more. What are common strategies you could apply to help you understand all of these different readings?
4. Pretend that, as a future job, you are hired to work as a scientist at NASA. What are some ways you might represent your ideas to the public? How would you decide which kind of representation to use?
5. What questions, if any, do you have remaining at the end of this unit? (Use the back of this sheet if you run out of room.)
