

## Problem Set 1

**Problem 1.** The connectives  $\wedge$  (and),  $\vee$  (or), and  $\Rightarrow$  (implies) come often not only in computer programs, but also everyday speech. But devices that compute the *nand* operation are preferable in computer chip designs. Here is the truth table for nand:

$P$	$Q$	$P \text{ nand } Q$
$T$	$T$	$F$
$T$	$F$	$T$
$F$	$T$	$T$
$F$	$F$	$T$

For each of the following expressions, find an equivalent expression using only nand and  $\neg$  (not).

(a)  $A \wedge B$

(b)  $A \vee B$

(c)  $A \Rightarrow B$

**Problem 2.** A self-proclaimed “great logician” has invented a new quantifier, on par with  $\exists$  (“there exists”) and  $\forall$  (“for all”). The new quantifier is symbolized by  $U$  and read “there exists a unique”. The proposition  $Ux P(x)$  is true iff there is *exactly one*  $x$  for which  $P(x)$  is true. The logician has noted, “There used to be two quantifiers, but now there are three! I have extended the whole field of mathematics by 50%!”

(a) Write a proposition equivalent to  $Ux P(x)$  using only the  $\exists$  quantifier,  $=$ , and logical connectives.

- (b) Write a proposition equivalent to  $\exists x P(x)$  using only the  $\forall$  quantifier,  $=$ , and logical connectives.

**Problem 3.** A media tycoon has an idea for an all-news television network called LNN: The Logic News Network. Each segment will begin with the definition of some relevant sets and predicates. The day's happenings can then be communicated concisely in logic notation. For example, a broadcast might begin as follows:

"THIS IS LNN. Let  $S$  be the set  $\{\text{Bill, Monica, Ken, Linda, Betty}\}$ . Let  $D(x)$  be a predicate that is true if  $x$  is deceitful. Let  $L(x, y)$  be a predicate that is true if  $x$  likes  $y$ . Let  $G(x, y)$  be a predicate that is true if  $x$  gave gifts to  $y$ ."

Complete the broadcast by translating the following statements into logic notation.

- (a) If neither Monica nor Linda is deceitful, then Bill and Monica like each other.
- (b) Everyone except for Ken likes Betty, and no one except Linda likes Ken.
- (c) If Ken is not deceitful, then Bill gave gifts to Monica, and Monica gave gifts to someone.
- (d) Everyone likes someone and dislikes someone else.

### Problem Set 1

**Problem 4.** Let  $n$  be a positive integer. Prove that  $\log_2 n$  is rational if and only if  $n$  is a power of 2. Assume any basic facts about divisibility that you need; just state your assumptions explicitly.

**Problem 5.** A *triangle* is a set of three people such that either every pair has shaken hands or no pair has shaken hands. Prove that among every six people there is a triangle. Suggestion: Initially, break the problem into two cases:

1. There exist at least three people who shook hands with person  $X$ .
2. There exist at least three people didn't shake hands with  $X$

(Why must at least one of these conditions hold?)

**Problem 6.** Let  $x$  and  $y$  be nonnegative real numbers. The *arithmetic mean* of  $x$  and  $y$  is defined to be  $(x + y)/2$ , and the *geometric mean* is defined to be  $\sqrt{xy}$ . Prove that the arithmetic mean is equal to the geometric mean if and only if  $x = y$ .

**Problem 7.** Use case analysis to prove that all integral solutions to the equation

$$\frac{1}{m} + \frac{1}{n} = \frac{1}{e} + \frac{1}{2}$$

subject to these constraints

$$m \geq 3$$

$$n \geq 3$$

$$e > 0$$

are in this table:

$m$	$n$	$e$
3	3	6
3	4	12
3	5	30
4	3	12
5	3	30

These equations reveal something fundamental about the geometry of our three-dimensional world; we'll revisit them in about three weeks.
